related software for Linux1. Field
of the Invention The present
invention relates to a data
transmission device for
performing transmission of data
(hereinafter referred to as “packet
data”) to be delivered, and
particularly relates to a data

transmission device capable of promptly receiving packet data. 2.

Description of the Related Art

Recently, a system has been realized in which two computers located in two different places communicate with each other, by connecting between the two computers by a network (see JP-A-2005-208450, JP-A-2005-247419, JP-A-2004-171177). There is such a case that a packet data to be received is smaller than that to be

transmitted. In such a case, data of the packet data to be received, which is larger than the data of the packet data to be transmitted, is transferred, in order to secure a buffer of a transfer buffer for storing the packet data. The present invention relates to a new and distinctive corn inbred line, designated LH255. There are numerous steps in the development of any novel, desirable plant germplasm. Plant breeding begins with the analysis

and definition of problems and
weaknesses of the current
germplasm, the establishment of
