Bone metabolism is affected by various factors including aging and various diseases. Therefore, biomarkers to reflect bone metabolism would be useful. Currently, a number of biomarkers for bone metabolism are being developed, and recently, urinary type I collagen cross-linked N-telopeptide (NTX) and bone alkaline phosphatase have been approved by the U.S. Food and Drug Administration for monitoring drug treatments to increase bone mass. However, the correlation between bone metabolic markers and bone mass is weak, and bone metabolism markers alone are not sufficient for monitoring drug treatments to increase bone mass. Therefore, the serum and urine
